Assignment Name : Sumary On RAD

RAD is a software development methodology that prioritizes quick development and iterative relese cycles. It emphasizes:

• Rapid prototyping: Creating early, functional prototypes to gather user feedback and refine requirements.

• Iterative development: Continously improving the product based on user feedback and evolving needs.

• Reusablity: Leveraging existing components and code modules to accelerate development.

• Time-boxed Development: Breaking down development into time-limited iterations to mantain focus, and momentum.

RAD is a fast software development method focused on user involvment and rapid delivery.
